# PokeHunterBot GUIDE

WARNING:

Please be aware that using bots may violate some game's policies and could lead to Sanctions if discovered by the game developers. Use the bot at your own risk.

**Don't use this bot to break any game's policies.**

REQUIREMENTS:

- Ensure that you have Java(8 or higher) installed on your system to run the bot. You can download it from the official site: https://www.java.com/download/ie_manual.jsp

-A stable internet connection is required.

-You must use the English pokemon roms if you want the bot to work properly. you can use those roms : https://www.mediafire.com/file/sutv7dghgm8zwvc/Files4.zip/file

-Set your operating system's screen resolution PRECISELY to 1920x1080 with a 100% scale: https://support.microsoft.com/en-us/windows/view-display-settings-in-windows-37f0e05e-98a9-474c-317a-e85422daa8bb

-Make sure that your first Pokémon in your team can escape any battle from any encountered pokemon. If it can't, the bot may get stuck since it doesn't handle battles, Also make sure that your Pokémon doesn't have any passive skills that can prolong the battle.

-Sweet Scent move and in some case Surf move is required

-You need to have running shoes, and running shoes must be accesible through the "X" key.

-Set WASD to move (up ad "w"key),(down as "s"key), (left as "d"key) and (right as "a" key). Set Sweet Scent as shortcut "1", Bicycle as shortcut "2", and Teleport as shortcut "3".

-This bot has only been tested on Windows 10, and it's designed to work only with a QWERTY keyboard layout.
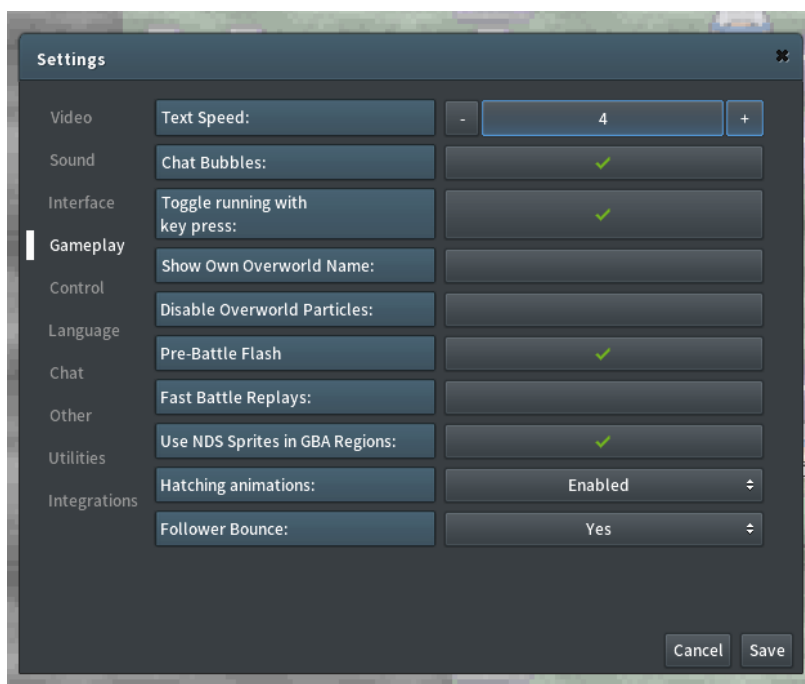

-In your game settings, choose windowed display mode and set the resolution to 1920* 1017 if you cannot select precisly 1920* 1017 make sure to select windowed display mode and a resolution that make the game frame look like the image below .

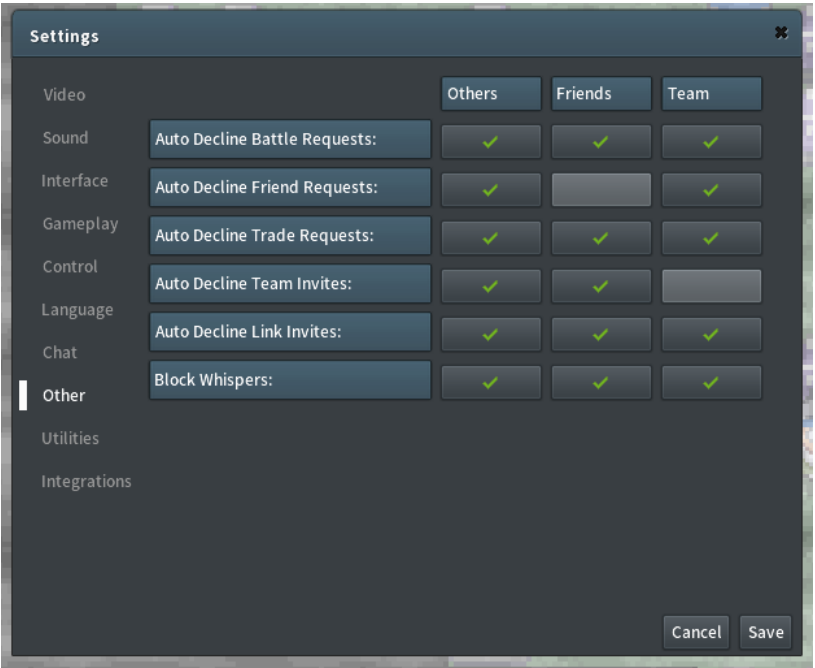

-Theme must be default scale 1x , Battle Window Size 100 , copy the following settings:

-Text speed must be set to 4. Toggle running with key press Must Be Enable. copy all of the following settings:

- Set Enable on auto decline any type of request to prevent the bot getting stuck:
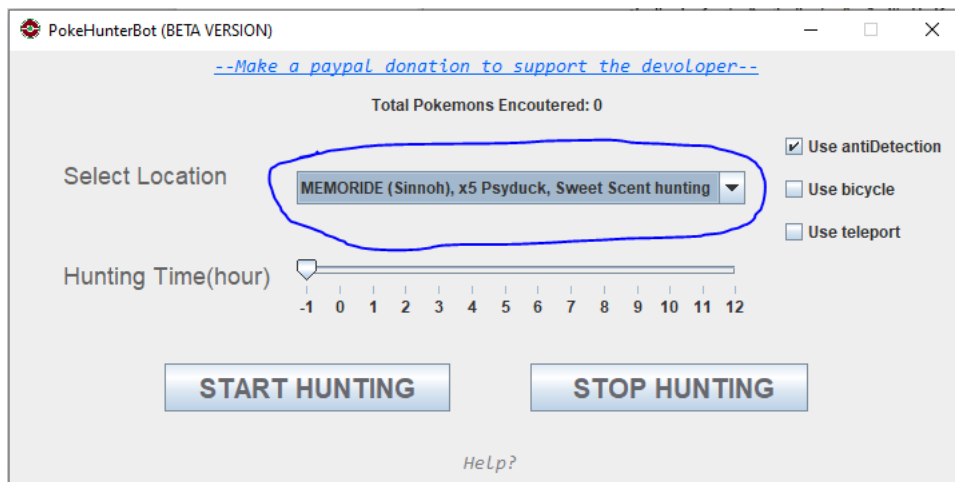

- Those Are the keys used by the Bot copy them:

Key A:	Z
Key B:	X
Key X:	None
Key Y:	None
Key Up:	W
Key Down:	S
Key Left:	A
Key Right:	D
Hotkey 1:	1
Hotkey 2:	2
Hotkey 3:	3

HOW TO USE THE STEP BOT BY STEP:

1-Open the bot and select the shiny hunting location.

PokeHunterBot (BETA VERSION)

--Make a paypal donation to support the devoloper--

Total Pokemons Encoutered: 0

Select Location

MEMORIDE (Sinnoh), x5 Psyduck, Sweet Scent hunting ▼

☑ Use antiDetection
☐ Use bicycle
☐ Use teleport

Hunting Time(hour)
-1 0 1 2 3 4 5 6 7 8 9 10 11 12

START HUNTING   STOP HUNTING

Help?

2-Position your player character directly in front of the Poké Center nurse of the shiny hunting locationTown selected previously.
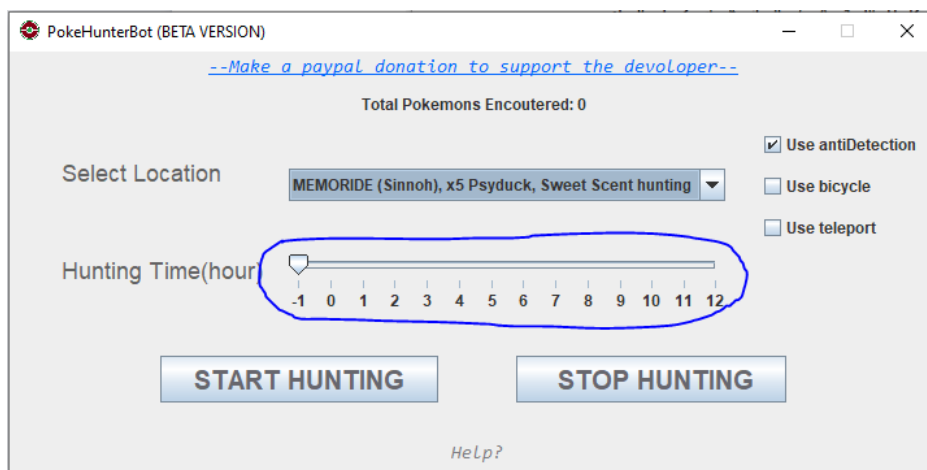

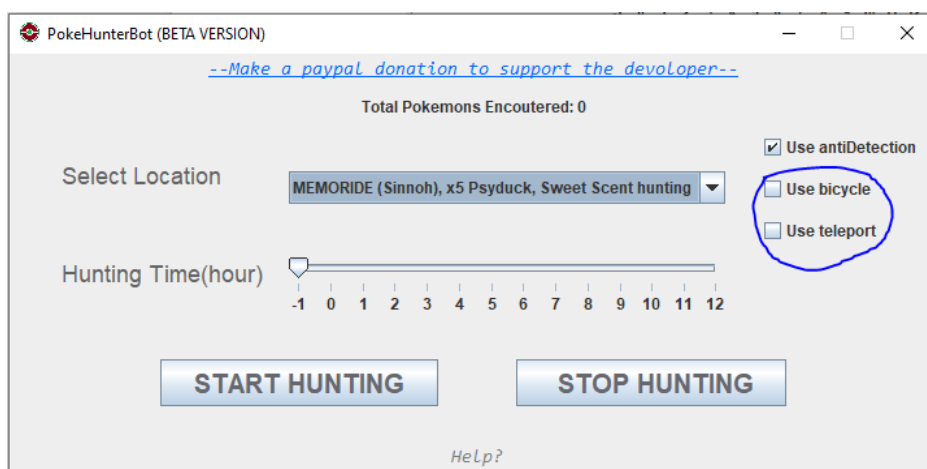

LIKE THIS:

3-To enhance security, enable the anti-detection feature by checking the checkbox. This will activate randomized delay between input, automatic captcha completion, Random player behaviors.
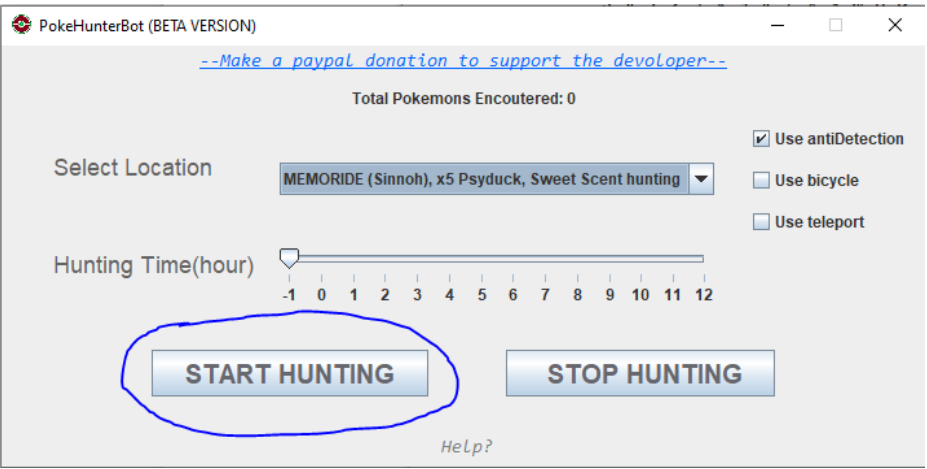

4-Choose the desired operating time in hours from the slider. If you select -1, it will continue until you manually stop it.

5-If you want the bot to be faster, you can achieve this by either running a bicycle or teleporting. To do so, you need to enable them and add them to your game shortcuts: Set Bicycle as hotkey "2" and Teleport as hotkey "3".

6-Click the "Start Hunting" button to activate the bot.

7-Swiftly switch back to your game tab, you have 5 second before the bot activate.

8-The bot will automaticly pause the game and emit a loud sond from your pc to warn you when a shiny pokemon is encountered, then you have to catch it as the bot doesn't handle combact.
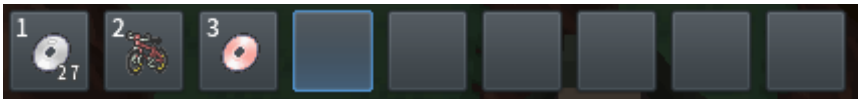

DEFAULT CONTROLS USED BY THE BOT:

Use the WASD keys to move: "S" key (move down), "W" key (move up), "A" key (move left),

 "D" key (move right).

Use "X" key to activate running shoes.

Use the "Z" key to activate/interact with objects.

SHORTCUT/HOTKEYS TO SET:

- Sweet Scent as hotkey "1" (Required)

- Bicycle as hotkey "2" (Optional)

- Teleport as hotkey "3" (Optional)

BOT FEATURES:

- **Auto Traveling**: the bot is capable of autonomously traveling back and forth in search of shiny Pokémon in a continuous loop.

- **SweetScent hunting**: the bot will always use the "seet scent" in order to spawn an orde of pokemon, for this reason the move "sweet scent" must be set as hotkey 1 in the game.

- **Auto Shiny Detection**: The bot will automatically detect when a shiny Pokémon is found and pause while sounding an alert loudly. The detection of the shiny Pokémon is possible because the bot takes a screenshot of the combat and analyzes the Pokémon. This is why the operating system resolution must be set to 1920x1080, the scale to 100%, and the in-game resolution must be set to windowed mode at 1920x1017 or as the image shown upper in the guide. Otherwise the bot could fail to detect the shiny or detect false positive since the bot take a screenshot of the screen to evaluate the presence or not of a shiny.

- **Randomized Timing Between Key Presses**: The bot will introduce random delays between key presses to simulate a more human-like interaction to confuse anti-bot systems.

- **Occasional Random Parkour**: The bot will occasionally perform random parkour actions to confuse anti-bot systems.

- **Use teleport move:** If the "teleport" checkbox is selected and the teleport move is set as hotkey 3 in the game, the bot will use it to automatically return to the last Pokecenter.

- **Use Bycicle:** In some hunting location the bot can use bycicle to speed up the parkour.

- **Pokemon encounter counter:** the bot will automaticly keep track of the number of pokemons encountered during a bot session, when the program is closed and re-open however the conter reset to 0.

- **Captcha solving:** The bot is able to solve the anti-bot captcha that the game system provides againts boting through AI , even though it's very unlikely that the captcha will occur using this bot.
